EDUCATION

Toronto Metropolitan University <i>Bachelor of Computer Engineering - Data Structures, Algorithms, OOP, Operating Systems</i>	Toronto, ON <i>Sep. 2024 - Apr. 2029</i>
---	---

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, C, C++, C#, HTML/CSS, SQL, Bash
Cloud & DevOps: Git, AWS, GCP, Azure, Docker, Kubernetes, Agile/Scrum, CI/CD, REST APIs
Frameworks & Data: React, Node.js, Next.js, Express.js, Tailwind, PostgreSQL, Flask, TensorFlow, OpenCV, MongoDB, Redis, MCP Servers

EXPERIENCE

Belvoro <i>Founding Engineer TypeScript, React, Node.js, PostgreSQL, AWS, REST APIs</i>	Toronto, ON <i>Dec. 2025 - Present</i>
---	---

- Architected and deployed a production AI-native software platform for small businesses, automating customer communication, lead qualification, and appointment booking reducing administrative workload by **70%** across 50+ clients.
- Built a backend on Node.js and PostgreSQL deployed on AWS, processing thousands of customer interaction events weekly with **99.9%** uptime across all production deployments.
- Engineered real-time REST/webhook infrastructure to sync customer interaction events, transcripts, and CRM updates, improving data reliability and reducing manual follow-up by **60%**.
- Developed a white-label client portal with real-time analytics, agent customization, and billing management, decreasing client support requests by **50%**.

Atelier <i>Software Engineering Intern AWS, Node.js, Redis, LangChain</i>	Toronto, ON <i>May. 2025 - Sept 2025</i>
---	---

- Developed an **AI-driven product analytics start-up with \$60,000 in funding** to help companies turn website analytics into automated feature improvements
- Designed an end-to-end analytics ingestion pipeline that integrates data from **any analytics provider** into an LLM
- Developed an AI-driven feature generation engine using LangChain to **analyze website structure** and automatically produce **deployable UI/UX code changes**, eliminating the need for manual iterations

ConneXU <i>Software Engineering Intern AWS, GCP, React.js, TypeScript, FastAPI, PostgreSQL</i>	Toronto, ON <i>May. 2024 - Sep. 2024</i>
--	---

- Collaborated in an Agile team environment with sprint planning and code reviews to expand the user base by 500+ on a full-stack SaaS AI platform, deploying to AWS ECS and GCP via CI/CD pipelines (GitHub Actions, Docker) with **99.9%** uptime.
- Implemented semantic search across 10,000+ events using PostgreSQL functions, reducing irrelevant results by **67%**.
- Built a map view with dynamic marker clustering using Google Maps and Redis, creating REST endpoints that cut render times by **81%** and data payload by **95%** through region-based, on-demand loading.

Ambit Energy <i>Software Engineering Intern C, Python, SQL, Power BI</i>	Toronto, ON <i>Mar. 2023 - Aug. 2023</i>
--	---

- Designed and optimized real-time data processing algorithms, leveraging **SQL queries** and **indexing techniques**, reducing computation time by **30%** for faster decision-making
- Implemented **predictive analytics models** using **machine learning** and **statistical techniques** in Python and Power BI, optimizing energy consumption patterns and improving efficiency by **15%**

PROJECTS

BeyondSight (Hack the North Winner) 🏆 <i>Python, SLAM, Yolo, Whisper, Docker</i>	Sep. 2025
---	-----------

- Selected as a track winner out of **2,000+ hackers** and **300+ projects** at Canada's largest hackathon: **Devpost**
- Built a full-stack **hardware + AI system** enabling navigation and communication for individuals who are deafblind using **AI-powered** text-to-speech and speech-to-text, a **vest with haptic motors** and a **braille-enabled gauntlet**
- Integrated **OpenAI Whisper** for speech recognition with in-house optimizations that improved transcription accuracy by **15%** and reduced latency by **21%**
- Deployed components in **Docker** containers and optimized outdated **Xbox camera** support on Linux for navigation

FATELESS Studios (Hack the Valley Winner) 🏆 <i>Python, MCP Server, Gemini</i>	Oct. 2025
--	-----------

- Selected as a track winner out of **750+ hackers** and **100+ projects** at one of Canada's largest hackathons: **Devpost**
- Developed an **MCP-powered AI pipeline system** infinitely automating the generation of **entire games** from character/cutscene/background generation, animation and gameplay logic, to player decision management in real time.
- Utilized **8 different pipelines** for **game generation**, from Nano Banana for creating custom sprites and backgrounds to using Veo 3 to create movie-grade cutscenes integrated into gameplay.
